Just because warfare is moving to the cyber realm, it does not mean that lessons from real battlegrounds have lost their relevance and significance.

At a time when cyber-attacks continue to ravage the digital world, IT & Security professionals were asked about the size and skill set of their organization's cybersecurity team.

In this talk, we will discuss a strategy to develop the best cyber warfare professionals by teaching them to know their enemy, their techniques and their view of the IT world, and help your cybersecurity team know themselves.
