

The evolution of banking malware – A Westpac Digital Story

Josh Nast¹

¹Westpac

In this session Westpac will take you on chronological cybercrime journey starting with the 1st attacks targeting the Australian digital community through to the today's threat landscape. We will discuss how these threats have been instrumental in formulating our tactical and strategic responses by creating an agile and robust defence in depth approach to cybercrime events. We will cover how we have used this collective intelligence and shared data to enhance our operational capability by integrating this information into our technology, people and processes which ultimately allow us to better protect our customers from these financially motivated cyber-attacks. We will conclude with current observations on how cybercriminals are trying to circumvent these stronger digital banking controls by moving towards digital pathways of least resistance in order to facilitate financial fraud.
